...

Most 2-stroke engines require that you mix the fuel with a special oil. In most small 2-stroke engines (like those for string-trimmers and chainsaws) the oil is mixed with the gasoline. In larger engines, the fuel is injected into the engine. This oil is required to lubricate the engine. In 4-stroke engines, the lubricating oil is in the crankcase.

I have a 49cc 2cycle engine that I replaced the carb on. It has fresh gas and appears to have a spark. I can't get it to fire even if I put some starter fluid in the air intake. It seems to have compression. The motor has sat for a few years in a garage, it did have old gas that I clean out of the tank.
