Although Chinese societies have generally become striking as the classic over-achievers in international measures of academic performance, there has been no specialised publication exploring early childhood curriculum in Chinese contexts. Through this book, readers will learn more about how the Chinese context and culture collide with educators' beliefs about the right activities for children and educators in early childhood settings. This book will be the first one of its kind to focus on early childhood curriculum in Chinese societies – from social context and culture to reforms and practices, and finally to the

lessons that researchers, policymakers and practitioners could learn, as well as future directions. Is play valued? Are young children schooled earlier in Chinese societies? How do Chinese children learn in kindergartens? What is valued by Chinese educators when they implement early childhood curricula? How do Chinese teachers deliver early childhood curricula for their young children? Why were Chinese early childhood curricula implemented in these ways? Answers to these questions and more will be provided in this pioneering book.

There is a paradox when it comes to Darwinian ideas within the academy. On

one hand, Darwin's theories have famously changed the foundational ideas related to the origins of life, shaping entire disciplines in the biological sciences. On the other hand, people in educated societies across the globe today are famously misinformed and uneducated about Darwinian principles and ideas. Applications of evolutionary theory outside the traditional areas of biology have been slow to progress, and scholars doing such work regularly run into all kinds of political backlash. However, a slow but steady push to advance the teaching of evolution across academic disciplines has been under way for more than a decade. This book serves to integrate the vast literature in the interdisciplinary field of Evolutionary Studies (EvoS), providing clear examples of how evolutionary concepts relate to all facets of life. Further, this book provides

chapters dedicated to the processes associated with an EvoS education, including examples of how an interdisciplinary approach to evolutionary theory has been implemented successfully at various colleges, universities, and degree programs. This book also offers chapters outlining a variety of applications to an evolution education, including improved sustainable development, medical practices, and creative and critical thinking skills. Exploring controversies surrounding evolution education, this volume provides a roadmap to asking and answering Darwinian questions across all areas of intellectual inquiry.

Different areas of inquiry have addressed the tragedy of school shootings and their deeply disruptive impacts upon school culture, classrooms, and student learning in this contemporary moment. Therefore, it is important to bring together interdisciplinary research on the long-term impacts of these events on students, teachers, and communities. In an age where arming classroom teachers is a serious policy initiative, there is a question of how a culture of fear manifests itself in those involved in school systems. There is a need to study these effects and implications in a time where violence and school shootings appear to have become more common than ever before. Hence, there is a need for diverse perspectives in this area of complex and urgent inquiry. *Impact of School Shootings on Classroom Culture, Curriculum, and Learning* explores the manifestations of the threat of

school shootings and the aftermath of such tragic events through an interdisciplinary approach including but not limited to inquiries from educational psychology, sociology, educational philosophy, school leadership, and school culture with a view towards understanding the enduring and obscured effects of school shootings beyond the prevailing emphasis on facility safety and security. While chapters highlight topics such as resilience and recovery, school culture, sociology of schools, leadership and school regulation, and many more areas of interest, this book is ideal for educational leaders and administrators, classroom teachers, counselors, therapists, psychologists, school division trustees, law enforcement, policymakers, researchers, academicians, and students looking for the impacts and aftermath of school shootings on all aspects of education.

This book brings together voices and perspectives from across the world and draws in a new generation of curriculum scholars to provide fresh insight into the contemporary field. By opening up Curriculum Studies with contributions from twelve countries—including every continent—the book outlines and exemplifies the challenges and opportunities for transnational curriculum inquiry. While curriculum remains largely shaped and enabled nationally, global policy borrowing and scholarly exchange continue to influence local practice. Contributors explore major shared debates and future implications through four key sections: Decolonising the Curriculum; Knowledge Questions and Curriculum Dilemmas; Nation, History, Curriculum; and Curriculum Challenges for the Future.

In the movement toward standards-based education, an important question stands out: How will this reform affect the 10% of school-aged children who have disabilities and thus qualify for special education? In *Educating One and All*, an expert committee addresses how to reconcile common learning for all students with individualized education for "one"--the unique student. The book makes recommendations to states and communities that have adopted standards-based reform and that seek policies and practices to make reform consistent with the requirements of special education. The committee explores the ideas, implementation issues, and legislative initiatives behind the tradition of special education for people with disabilities. It investigates the policy and practice implications of the current reform movement toward high educational

standards for all students. Educating One and All examines the curricula and expected outcomes of standards-based education and the educational experience of students with disabilities--and identifies points of alignment between the two areas. The volume documents the diverse population of students with disabilities and their school experiences. Because approaches to assessment and accountability are key to standards-based reforms, the committee analyzes how assessment systems currently address students with disabilities, including testing accommodations. The book addresses legal and resource implications, as well as parental participation in children's education.
