The 2016 European Athletics Championships was held in Amsterdam, Netherlands, between 6 and 10 July 2016. It was the first time the Netherlands hosted the event. Due to 2016 being an Olympic year, there was no racewalking and the marathon competition was replaced by half marathon. The Russian team did not participate due to the suspension of the All-Russia Athletic Federation by the International Association of Athletics Federations. However, Yuliya Stepanova was individually cleared by the IAAF

Analysing political discourse in the British press during a time of crisis and austerity, this book examines how the concept of the welfare state has been constructed between 2008 and 2015. At a time when the financial crisis and government policies have put the welfare state under increased pressure, a corpus from four British newspapers from across the political spectrum - the Guardian, Daily Mirror, Daily Mail, and Daily Telegraph - is brought together to investigate the political debate on its evaluation and the ambiguity about its exact definition. Combining two theoretical approaches, Malgorzata Paprota outlines the figurative models and scenarios relevant to this element of the political system. The discourse-historical approach to discourse analysis is used to establish what the welfare state is, tracing the boundaries of the concept and which elements of political reality are explicitly associated with it. Conceptual metaphor theory is then used to explore the figurative conceptualisations of the welfare state. Together, this book shows

the discursive construction, and shifting boundaries and metaphors, of the welfare state by the British press and its use in current political debates.

Hosting over 30,000 inhabitants and governed by competing militias, 'Ayn al-Hilwe in the south of Lebanon is one of the most contested refugee camps in the Middle East. Known as the 'Capital of the Palestinian Diaspora', the camp has endured a long history of internal power struggles and external influence and intervention. Based on extensive ethnographic research in the camp - focused on the actors who have shaped its modern political trajectory since the rupture caused by the 1993 Oslo Accords - The Palestinian National Movement in Lebanon places the attention on the role of exile leaderships, camp-based militia commanders and shape-shifting networks of patronage in the political landscape of the Palestinian movement in Lebanon. Offering original empirical and theoretical findings, this book will be essential reading for students of the Palestinian movement and refugee politics in the Middle East and beyond.

Open data and policy implications coming from data-aware planning entail collection and pre- and postprocessing as operations of primary interest. Before these steps, making data available to people and their decision-makers is a crucial point. Referring to the relationship between data and energy, public administrations, governments, and research bodies are promoting the construction of reliable and robust datasets to pursue policies coherent with the Sustainable Development Goals, as well as to allow citizens to make informed choices. Energy engineers and planners must provide the simplest and most robust tools to collect, process, and analyze data in order to offer solid data-based evidence for future projections in building, district, and regional systems planning. This Special Issue aims at providing the state-of-the-art on open-energy data analytics; its availability in the different contexts, i.e., country

peculiarities; and its availability at different scales, i.e., building, district, and regional for data-aware planning and policy-making. For all the aforementioned reasons, we encourage researchers to share their original works on the field of open data and energy analytics. Topics of primary interest include but are not limited to the following: 1. Open data and energy sustainability; 2. Open data science and energy planning; 3. Open science and open governance for sustainable development goals; 4. Key performance indicators of data-aware energy modelling, planning, and policy; 5. Energy, water, and sustainability database for building, district, and regional systems; 6. Best practices and case studies.

This unique work compiles the latest knowledge around veterinary nutraceuticals, commonly referred to as dietary supplements, from ingredients to final products in a single source. More than sixty chapters organized in seven sections collate all related aspects of nutraceutical research in animal health and disease, among them many novel topics: common nutraceutical ingredients (Section-I), prebiotics, probiotics, synbiotics, enzymes and antibacterial alternatives (Section-II), applications of nutraceuticals in prevention and treatment of various diseases such as arthritis, periodontitis, diabetes, cognitive dysfunctions, mastitis, wounds, immune disorders, and cancer (Section-III), utilization of nutraceuticals in specific animal species (Section-IV), safety and toxicity evaluation of nutraceuticals and functional foods (Section-V), recent trends in nutraceutical research and product development (Section-VI), as well as regulatory aspects for nutraceuticals (Section-VII). The future of nutraceuticals and functional foods in veterinary medicine seems bright, as novel nutraceuticals will emerge and new uses of old agents will be discovered. International contributors to this book cover a variety of specialties in veterinary medicine, pharmacology, pharmacognosy, toxicology, chemistry, medicinal chemistry, biochemistry, physiology, nutrition, drug development, regulatory frameworks, and the nutraceutical industry. This is a highly

informative and carefully presented book, providing scientific insight for academia, veterinarians, governmental and regulatory agencies with an interest in animal nutrition, complementary veterinary medicine, nutraceutical product development and research.

As the world plans for economic recovery following the global COVID-19 pandemic, major economies are looking to comprehensive strategies for addressing carbon risks and identifying green finance opportunities. Since Bank of England Governor Mark Carney and Michael Bloomberg began tackling climate change as a financial concern, the international financial community has been developing sophisticated analytical tools that will enable the success of comprehensive efforts to address carbon risks and identify green finance opportunities. This timely publication offers a cutting-edge analysis of the financial aspects of climate change. It discusses the most important analytical tools, their origin, how they work, where they can go, and how they fit into a larger strategy. First, reporting frameworks can allow companies to see how well they are addressing carbon risks, in particular with respect to the recommendations of the Task Force on Climate-related Financial Disclosures. Second, by quantifying how much greenhouse gas companies emit into the atmosphere as a direct or indirect result of their operations, carbon footprint calculations can help identify carbon risks with particular companies, especially within supply chains. Third, brown taxonomies can help investors identify current carbon risks by classifying fossil fuel assets in a systematic manner. Fourth, green taxonomies can help investors identify current green finance opportunities by classifying sustainable activities in a systematic manner. Fifth, scenario analysis for assets can help investors identify future carbon risks and green finance opportunities. Finally, stress testing for liabilities can help insurers and banks address future carbon risks and better inform policymakers. Scholars,

policymakers, and business professionals will find this book informative. They will gain a comprehensive understanding of the analytical tools supporting efforts to address carbon risks and identify green finance opportunities. This will hopefully make these individuals more successful in their personal endeavors to build a more sustainable and resilient economy for future generations.

This book addresses the current challenges of sustainable development, including its social, economic and environmental components. The author argues that we need to develop a new concept of time based on inter-generational solidarity, which focuses both on the long- and the short term. The evolution of man's notions of time are analyzed from prehistory to modern times, showing how these concepts shape our worldviews, our ecological paradigms and our equilibrium with our planet. Practical approaches to dealing with the major medium- and long term sustainability challenges of the 21st century are presented and discussed. This is a thought provoking and timely book that addresses the main global socioeconomic and environmental challenges facing the current and future generations, using science-based analysis and perspectives. It presents an historical narrative of the advent of progress, economic growth and technology, and discusses the structural changes needed to co-create sustainable pathways. It provides hope for our future on Earth, mankind's common home. António Guterres, Secretary-General of the United Nations This is an amazing, almost mind-boggling book. The author takes a look at the true whole, i.e., the development of the human enterprise since its very beginning. This enterprise is evidently a possibility under the boundary conditions of cosmological dynamics and natural evolution, but evidently also a highly improbable one. It is all but a miracle that the Earth system in its present form exists and happens to support a technical civilization. Will this civilization

last long, will it transform itself into something even more exceptional, or will it perish in disgrace? Santos dares to address these grandest of all questions, equipped with a unique transdisciplinary wisdom drawing on physics, cybernetics, geology, biology, economics, anthropology, history, and philosophy. And he dares to dive into the deepest abysses of thinking, where categorial monsters like time and progress lurk. Thereby, he takes us on fascinating journey, during which we perceive and grasp things we have never seen and understood before. One of the best essays I have ever read. John Schellnhuber, founding director of the Potsdam Institute for Climate Impact Research (PIK) and former chair of the German Advisory Council on Global Change

This book sheds new light on if and why, between 2009 and 2015, European governments succeeded or failed in initiating and actually realizing some of the farthest-reaching austerity plans in modern history. The author analyzes the economic and political context and the underlying causes of austerity and economic adjustment packages during the Euro crisis. In doing so, he shows that austerity has its roots in an institutional mismatch between capitalist diversity in the Eurozone on the one hand, and an ill-conceived common economic regime on the other. In this context, austerity trumped politics, and even democracy itself. The book will appeal to scholars of political science and comparative political economy, as well as governmental policymakers and practitioners in the finance sector.
