The iPod line came from Apple's "digital hub" category, when the company began creating software for the growing market of personal digital devices. Digital cameras, camcorders, and organizers had well-established mainstream markets, but the company found existing digital music players "big and clunky or small and useless" with user interfaces that were "unbelievably awful." [9] so Apple decided to develop its own.

There is possibly no other company which is so casual and at the same time so powerful as the computer and entertainment manufacturer Apple. The company controls the online-music market, the market for portable music players and is now capturing the high-tech mobile phone market. Apple moves into new electronic markets with strong competitors, in order to monopolise them just a short time later. The CEO, Steve Jobs, has brought a brand into being that is different and at the same time mainstream. A strong magnetic brand which yields more influence in people's life than one would care to admit. This is absolutely the reason why every company in the world wishes for a strong magnetic brand which can be defined as a "CULT BRAND". They get repeatedly chosen over the competition. And if they are a strong enough brand their customers not only use their products, but evangelize them to the world. This project aims to analyze Apple's marketing activities in order to figure out, what makes this company so successful. It adds to the traditional marketing theory, the new theory of "cult marketing" because traditional marketing delivers no approach to explain the behavior of cult brands. The phenomena of a Cult Brand are comparable to the patterns of a religion and Apple as well has strong believers. When it comes to their favorite brand, they enjoy telling who ever will listen how great it is and why they love it so much. People are camping in front of Apple's stores just to get their latest innovative product. And if their Messiah, Steve Jobs, enters the stage to introduce a new product to thousands of viewers, he brings the house down. This book discusses Apple's unique Marketing Strategy and delivers a guideline on the Example of Apple of the needed conditions to convert an ordinary brand into a "CULT BRAND".

On October 23, 2001, Apple Computer, a company known for its chic, cutting-edge technology -- if not necessarily for its dominant market share -- launched a product with an enticing promise: You can carry an entire music collection in your pocket. It was called the iPod. What happened next exceeded the company's wildest dreams. Over 50 million people have inserted the device's distinctive white buds into their ears, and the iPod has become a global obsession. The Perfect Thing is the definitive account, from design and marketing to startling impact, of Apple's iPod, the signature device of our young century. Besides being one of the most successful consumer products in decades, the iPod has changed our behavior and even our society. It has transformed Apple from a computer company into a consumer electronics giant. It has remodeled the music business, altering not only the means of distribution but even the ways in which people enjoy and think about music. Its ubiquity and its universally acknowledged coolness have made it a symbol for the digital age itself, with commentators remarking on "the iPod generation." Now the iPod is beginning to transform the broadcast industry, too, as podcasting becomes a way to access radio and television programming. Meanwhile millions of Podheads obsess about their gizmo, reveling in the personal soundtrack it offers them, basking in the social cachet it lends them, even wondering whether the device itself has its own musical preferences. Steven Levy, the chief technology correspondent for Newsweek magazine and a longtime Apple watcher, is the ideal writer to tell the iPod's tale. He has had access to all the key players in the iPod story, including Steve Jobs, Apple's charismatic cofounder and CEO, whom Levy has known for over twenty years. Detailing for the first time the complete story of the creation of the iPod, Levy explains why Apple succeeded brilliantly with its version of the MP3 player when other companies didn't get it right, and how Jobs was able to convince the bosses at the big record labels to license their music for Apple's groundbreaking iTunes Store. (We even learn why the iPod is white.) Besides his inside view of Apple, Levy draws on his experiences covering Napster and attending Supreme Court arguments on copyright (as well as his own travels on the iPod's click wheel) to address all of the fascinating issues -- technical, legal, social, and musical -- that the iPod raises. Borrowing one of the definitive qualities of the iPod itself, The Perfect Thing shuffles the book format. Each chapter of this book was written to stand on its own, a deeply researched, wittily observed take on a different aspect of the iPod. The sequence of the chapters in the book has been shuffled in different copies, with only the opening and concluding sections excepted. "Shuffle" is a hallmark of the digital age -- and The Perfect Thing, via sharp, insightful reporting, is the perfect guide to the deceptively diminutive gadget embodying our era.
