A sharp and funny dissection of different aspects of the Indian character, from our attitude to sex, religion and women to our views on corruption and the English language. Irreverent and full of witty observations, this is a Khushwant Singh classic!

A definitive, analytical and meticulous account of the present state of the nation – from a constitutional perspective – by one of India's most respected legal luminaries An ardent defender of the Constitution of India, Fali Nariman has today attained the status of an outstanding lawyer who strongly believes in the rule of the law and stands by his convictions. In this timely volume, the author highlights crucial issues that the legislature, the executive, judiciary, the bar and the common people have to deal with virtually on a day-to-day basis. His main focus is on corruption at various levels and in "hallowed" institutions, including the judiciary. The author contends that the legislative and executive wings of the government – the elected representatives of the people – were (and are) expected to provide for the welfare of the people. He points out that they have failed miserably simply because making of laws is not enough; applying and enforcing laws – which are also the primary duties of the government – have left much to be desired. Consequently, it is the judiciary that tells the government when and how to distribute excess food, what crops to grow and what not to grow, which economic projects are good for the country and which are not, and what fuel should be used in our vehicles and whether 2G/3G licences should be allotted only through auctions! The judiciary is hence accused of overreach! The contents also throw light on other important subjects such as: the implications of reservations for certain sections of the population (including minorities); the true purpose and significance of the Constitution; Centre-State relations; and whether the Constitution has benefited the common people over the years. This is a book that is absorbing as well as thought-provoking that will make the readers put on their thinking caps.

Every year, the U.S. Army must select from an applicant pool in the hundreds of thousands to meet annual enlistment targets, currently numbering in the tens of thousands of new soldiers. A critical component of the selection process for enlisted service members is the formal assessments administered to applicants to determine their performance potential. Attrition for the U.S. military is hugely expensive. Every recruit that does not make it through basic training or beyond a first enlistment costs hundreds of thousands of dollars. Academic and other professional settings suffer similar losses when the wrong individuals are accepted into the wrong schools and programs or jobs and companies. Picking the right people from the start is becoming increasingly important in today's economy and in response to the growing numbers of applicants. Beyond cognitive tests of ability, what other attributes should selectors be considering to know whether an individual has the talent and the capability to perform as well as the mental and psychological drive to succeed? *Measuring Human Capabilities: An Agenda for Basic Research on the Assessment of Individual and Group Performance Potential for Military Accession* examines promising emerging theoretical, technological, and statistical advances that could provide scientifically valid new approaches and measurement capabilities to assess human capability. This report considers the basic research necessary to maximize the efficiency, accuracy, and effective use of human capability measures in the military's selection and initial occupational assignment process. The research recommendations of *Measuring Human Capabilities* will identify ways to supplement the Army's enlisted soldier accession system with additional predictors of individual and collective performance. Although the primary audience for this report is the U.S. military, this book will be of interest to researchers of psychometrics, personnel selection and testing, team dynamics, cognitive ability, and measurement methods and technologies. Professionals interested in of the foundational science behind academic testing, job selection, and human resources management will also find this report of interest.

Illustrated with 10 images. This book will be a descriptive grammar of the Esperanto language invented by L. L. Zamenhof, which will be complete and comprehensive in regards to a) the grammar of Esperanto as first outlined by Zamenhof in *Fundamento de Esperanto* and other foundational documents, and b) Esperanto as it is spoken today by the most committed Esperantists. (Proposed reforms to the Esperanto language will be discussed if they have serious support from a significant fraction of Esperanto enthusiasts). This book was started practically on a dare from the August 2006 issue of *Bob's Poetry Magazine*, in which Robert Happelberg boasted that he could print a complete and comprehensive grammar of Esperanto in just one 6 by 7 inch page. While this is obviously wrong, it's not too far off the mark. When completed, this book will require several standard size (8.5 by 11 in the USA) pages, but will still be much shorter than a complete grammar of a natural language like English or Slovene. In view of this goal, the number of examples provided for each concept will be kept to a bare minimum. Those wishing to build their Esperanto vocabularies are also referred to the Esperanto textbooks. It is acceptable in the beginning to word the text in an accessible manner like in a textbook, but the goal should be for all the text to be technical with a full command of linguistic jargon.
