Bones of Contention: A Creationist Assessment of Human ...

While evolutionists point to every new discovery of humanlike fossils as further evidence to support the theory that people evolved from apelike creatures, Marvin L. Lubenow contends that the fossils do more to disprove evolutionary theory than otherwise. In Bones of Contention, Lubenow offers readers of all backgrounds a readable argument for the creationist view of the origins of humankind that addresses all angles of the issue.In this new edition, Lubenow has thoroughly updated and revised his original material to reflect a dozen years of evolutionist theory and modern paleoanthropology. Scholars and laypeople alike will find solid answers, grounded in research, to all of their tough questions.

Bones of Contention: A Creationist Assessment of Human ...

Explores the nature of the debate over the findings of paleoanthropologists, looking at how the biases and preconceptions of scientists in the field shape their work, and telling the stories of some of the world's major fossil finds.

Bones of Contention: A Creationist Assessment of Human ...

First published as a series of articles in 1976, then in magazine format, this work has been completely revised and updated with new diagrams incorporating current information. Always intended to be understandable to the general reader, this book covers the reasons why a conservative (young earth), biblical view of the creation of our world fits the evidence found in fossils and the world as we see it. It would be easily read by late-teenage children but has enough information to satisfy an inquiring adult.

Argues that Neanderthal skeletons are the remains of post flood very old biblical patriarchs.

Bones of Contention: A Creationist Assessment of Human ...

Explore the truth of science and faith... and what it means to you! Uncover evidences of Creation in living systems Unravel the questions of Creation and the laws of science Understand the vanishing case for evolution science Many Christians are not aware that many legitimate scientists embrace the Genesis explanation of origins. In What is Creation Science?, two of the most respected members of that group have given us the benefit of their knowledge. The book itself, though technical in places, is remarkably clear, and its focus is on a fair dialogue of the issues. So much so that many thousands of readers have taken to heart Dr. Parker's challenge, to "Think About It!" The creation/evolution question is not an issue that concerns only biologists on the one hand and religious people on the other. In one way or another, the issue permeates every field of academic study and every aspect of national life. It deals with two opposing basic worldviews - two philosophies of origins and destinies, of life and meaning. Consequently, it is (or should be) of special concern to everyone.

Bones of Contention: A Creationist Assessment of Human ...

Examines the doctrine of creation throughout the Bible, not only in Genesis but other books such as Colossians and Ezra.

Bones of Contention: A Creationist Assessment of Human ...

How did life evolve on Earth? The answer to this question can help us understand our past and prepare for our future. Although evolution provides credible and reliable answers, polls show that many people turn away from science, seeking other explanations with which they are more comfortable. In the book Science, Evolution, and Creationism, a group of experts assembled by the National Academy of Sciences and the Institute of Medicine explain the fundamental methods of science, document the overwhelming evidence in support of biological evolution, and evaluate the alternative perspectives offered by advocates of various kinds of creationism, including "intelligent design." The book explores the many fascinating inquiries being pursued that put the science of evolution to work in preventing and treating human disease, developing new agricultural products, and fostering industrial innovations. The book also presents the scientific and legal reasons for not teaching creationist ideas in public school science classes. Mindful of school board battles and recent court decisions, Science, Evolution, and Creationism shows that science and religion should be viewed as different ways of understanding the world rather than as frameworks that are in conflict with each other and that the evidence for evolution can be fully compatible with religious faith. For educators, students, teachers, community leaders, legislators, policy makers, and parents who seek to understand the basis of evolutionary science, this publication will be an essential resource.
