There is a crack in the earth's crust that runs roughly 31 miles offshore, approximately 683 miles from Northern California up through Vancouver Island off the coast of British Columbia. The Cascadia Subduction Zone has generated massive earthquakes over and over again throughout geologic time—at least thirty – six major events in the last 10,000 years. This fault generates a monster earthquake about every 500 years. And the monster is due to return at any time. It could happen 200 years from now, or it could be tonight. The Cascadia Subduction Zone is virtually identical to the offshore fault that wrecked Sumatra in 2004. It will generate the same earthquake we saw in Sumatra, at magnitude nine or higher, sending crippling shockwaves across a far wider area than any California quake. Slamming into Sacramento, Portland, Seattle, Victoria, and Vancouver, it will send tidal waves to the shores of Australia, New Zealand, and Japan, damaging the economies of the Pacific Rim countries and their trading partners for years to come. In light of recent massive quakes in Haiti, Chile, and Mexico, Cascadia's Fault not only tells the story of this potentially devastating earthquake and the tsunamis it will spawn, it also warns us about an impending crisis almost unprecedented in modern history.

The Cascadia Subduction Zone is a crack in the earth ' s crust, roughly fifty kilometres offshore, running 1,100 kilometres from northern Vancouver Island to northern California. About every 500 years this fault generates a monster earthquake. There is roughly a thirty percent chance that it could happen again within the next fifty years. Or it could happen tonight. Without a doubt, the coming quake is one day closer today than it was yesterday. The Cascadia Subduction Zone is virtually identical to the offshore fault that wrecked Sumatra in 2004, and it will generate the same type of earthquake, a magnitude nine or higher. It will send crippling shockwaves across a far wider area than any of the California quakes you ' ve ever heard about, slamming five cities at the same time: Vancouver, Victoria, Seattle, Portland and Sacramento. Cascadia ' s fault will wreck dozens of smaller towns and coastal villages -- and no one in these places will be able to call their neighbours for help. Written by a journalist who has been following this story for twenty-five years, Cascadia ' s Fault tells the tale of this devastating future earthquake and the tsunamis it will spawn.

Scientists have identified Seattle, Portland, and Vancouver as the urban centers of what will be the biggest earthquake—the Really Big One—in the continental United States. A quake will happen--in fact it's actually overdue. The Cascadia subduction zone is 750 miles long, running along the Pacific coast from Northern California up to southern British Columbia. In this fascinating book, The Seattle Times science reporter Sandi Doughton introduces readers to the scientists who are dedicated to understanding the way the earth moves and describes what patterns can be identified and how prepared (or not) people are. With a 100% chance of a mega-quake hitting the Pacific Northwest, this fascinating book reports on the scientists who are trying to understand when, where, and just how big THE BIG ONE will be. From the Trade Paperback edition.

A journey around the United States in search of the truth about the threat of earthquakes leads to spine-tingling discoveries, unnerving experts, and ultimately the kind of preparations that will actually help guide us through disasters. It ' s a road trip full of surprises. Earthquakes. You need to worry about them only if you ' re in San Francisco, right? Wrong. We have been making enormous changes to subterranean America, and Mother Earth, as always, has been making some of her own. . . . The consequences for our real estate, our civil engineering, and our communities will be huge because they will include earthquakes most of us do not expect and cannot imagine—at least not without reading Quakeland. Kathryn Miles descends into mines in the Northwest, dissects Mississippi levee engineering studies, uncovers the horrific risks of an earthquake in the Northeast, and interviews the seismologists, structural engineers, and emergency managers around the country who are addressing this ground shaking threat. As Miles relates, the era of human-induced earthquakes began in 1962 in Colorado after millions of gallons of chemical-weapon waste was pumped underground in the Rockies. More than 1,500 quakes over the following seven years resulted. The Department of Energy plans to dump spent nuclear rods in the same way. Evidence of fracking ' s seismological impact continues to mount. . . . Humans as well as fault lines built our “ quakeland ” . What will happen when Memphis, home of FedEx's 1.5-million-packages-a-day hub, goes offline as a result of an earthquake along the unstable Reelfoot Fault? FEMA has estimated that a modest 7.0 magnitude quake (twenty of these happen per year around the world) along the Wasatch Fault under Salt Lake City would put a \$33 billion dent in our economy. When the Fukushima reactor melted down, tens of thousands were displaced. If New York ' s Indian Point nuclear power plant blows, ten million people will be displaced.

How would that evacuation even begin? Kathryn Miles ' tour of our land is as fascinating and frightening as it is irresistibly compelling.

A puzzling tsunami entered Japanese history in January 1700. Samurai, merchants, and villagers wrote of minor flooding and damage. Some noted having felt no earthquake; they wondered what had set off the waves but had no way of knowing that the tsunami was spawned during an earthquake along the coast of northwestern North America. This orphan tsunami would not be linked to its parent earthquake until the mid-twentieth century, through an extraordinary series of discoveries in both North America and Japan. The Orphan Tsunami of 1700, now in its second edition, tells this scientific detective story through its North American and Japanese clues. The story underpins many of today 's precautions against earthquake and tsunami hazards in the Cascadia region of northwestern North America. The Japanese tsunami of March 2011 called attention to these hazards as a mirror image of the transpacific waves of January 1700. The "Big One" is NOTHING compared to this... The San Andreas earthquake expected to hit California one day pales in comparison to the "Really Big One"--the Cascadia megaquake--a doomsday scenario that, when it goes off, is poised to utterly devastate the Pacific Northwest and endanger the lives of everyone who lives there. Kenneth Murphy, FEMA's Pacific Northwest director, was once quoted as saying: "Our operating assumption is that everything west of Interstate 5 will be toast." He's not exaggerating one bit. Not only will we be rocked by the biggest earthquake to EVER hit the mainland United States, but we'll be inundated with:

Massive Tsunamis Waves All Along the Coastline Destructive Flooding for Many Miles Inland Widespread Wildfires and Suffocating Smoke Dozens to HUNDREDS of Powerful Aftershocks Plus Downed Trees and Powerlines That Will Slow Rescue Efforts to a Crawl And More! You know earthquakes strike without warning, and if you live anywhere near the Pacific Northwest then you need to get ready for this approaching threat before it's too late. Now, expert prepper, Damian Brindle, shares his must-read advice for how you can stay safe when the Cascadia Megathrust quake strikes. Here's what you'll discover inside: Vital Earthquake Science You Should Know (to Understand Why This Megaquake is so Different Than Anything Previous) The "Who, What, When, Why and Where" Details You Need to Know (to Demystify the Event and its Destructive Aftermath) Precisely How a Cascadia Megathrust Quake Will Devastate the Entire Pacific Northwest (so You Know What to be Ready for) And the 7 Most Important Solutions to Survive This Coming Disaster (so You Know What to do Now to Stay Safe) Remember this: Every disaster America has ever faced pales in comparison to this doomsday threat - you won't get a second chance to be ready. Don't leave your survival up to chance! Fast to read and easy to implement, buy now and be prepared for when the Cascadia Megaquake strikes.

The definitive guide to getting ready for and staying safe after a major earthquake in the Pacific Northwest. FEMA recommends being prepared for two weeks of self-sufficiency after it occurs, and this handbook will show you how with clear, informative, and easy-to-implement steps. Recent seismic activity has made national headlines and underscored the fact that the Cascadia fault line off the coast of British Columbia, Washington, Oregon, and Northern California is overdue for a major earthquake. And when it happens, living conditions could be akin to those in the mid-nineteenth century. This handbook covers the supplies you need to stay safely in place, including water, food (and food prep), first aid, sanitation, health and

hygiene needs, shelter and bedding, and light/fire. It also includes lists of what to purchase and how to store it, as well as simple exercises to gain confidence in performing necessary tasks. Learn what to do during and immediately after an earthquake, how to develop a reunification plan, and how to communicate when basic infrastructure is down. It also addresses the particular concerns of those living in coastal areas (the tsunami zone) as well as those outside of the severe impact zone. It covers long-term ways to stay safe without modern conveniences and a crash course in survival techniques should the quake happen before all preparations are complete. Get Ready! presents information in clear, practical, and manageable steps, equipping the reader with the skills to care for themselves and their loved ones should a major earthquake hit. And when it does, the internet will not be an option, making this reference handbook invaluable. If you live in the Pacific Northwest, you need Get Ready!
