A cylinder liner or "sleeve" is a thin tube of material, usually made from spun grey cast iron, used to repair cylinder bores beyond recovery by re-boring alone. Instances where this might be necessary include occasions where no oversize piston is available, the bore is already beyond the maximum available oversize or the bore is damaged beyond the size of any pistons available.

Now that we know what's happening, it's clear that top hat liners will fix this problem once and for all, even in an engine with cracks in the aluminum. The flanges on top of the liner will seal tight against the head gasket, preventing any combustion gas from getting between the liner and the block and blowing things up.
