Machinery Diagnostics is certified in Vibration Analysis. Just as important, we have over 30 years of service experience solving vibration problems with a wide variety of rotating machinery. For rotating machinery, vibration analysis continues to provide the most meaningful amount of diagnostic information available over any other technology.

However, these are consequences and not initial causes of malfunction. In general, there is a lack of correlation between causes and consequences of malfunctions [1]. One of non-destructive methods, by which it is possible to identify and consequently eliminate the problem, is vibrational diagnostics or vibrodiagnostic of rotating machinery.
