By converting the CAN ID to the J1939 PGN you identify that this is the PGN 61444 from before. From the J1939-71 document, you observe that one of the SPNs within this PGN is Engine Speed (SPN 190) with details as in the table. Using these details, it is possible to extract the Engine Speed physical value data e.g. for plot purposes.

J1939 Explained - A Simple Intro (2020)

Communication with Caterpillar ECM over J1939. When the machine control system is first powered up, and the engine is not running, the System Log logs several J1939 events related to a couple of PGNs. Has anyone else seen this before? I don't believe it is the PGN timeout, as there are several ECM PGNs with timeouts that don't log errors.

J1939 Error - Caterpillar ECM / Software / IQAN

The PGN is a number defined in the SAE J1939 standard that groups together several SPNs into a meaningful group. The PGN is part of the CAN identifier. The 8-byte data (PDU) contain the values of individual SPNs. The example below shows a PGN 65262 (0xFEEEE):

Displaying Engine Data Using SAE J1939 - Jetter AG

According to the SAE J1939-71 Standard, the Engine Coolant Temperature is part of PGN 65262; it is the first byte in the 8-Byte data field as defined by SPN 110. SAE J1939-71 also states that the data is transmitted using a one-second interval. SPN 110 explains the coolant temperature format: Length = 1 Byte

If your engine or ECM is not listed you can utilize the Generic J1939 setting which utilizes the standard messaging for Oil Pressure, Engine Temperature and Engine Speed which is commonly available with most engine ECM brands supporting J1939. DTC Display Under the DTC menu in Rapidcore. There are other parameters programmable only from RapidCore.

J1939 Reference Manual - DynaGen

EEC2 contains information about the Accelerator Pedal (AP) position and J1939 assumes that this is measured by the Engine Controller. In some systems however, the AP position is measured by another module and a message with the same data format is transmitted to the Engine Controller as a global message.

J1939 Pgn Caterpillar Engine

The last few months I have been working on a project to read basic J1939 and/or J1708 PGN from a CAN Bus Network. The idea is just to read basic parameters such as Engine Hours and Total Distance from the Vehicle, to keep track of all our fleet and automatically have registers on our database of the Engine Hours and the Distance the vehicles travelled. These are standards PGN from the J1939 ...
