o ù l'image de la tresse prend tout son sens. Les destins de 3 femmes vont être reliés par leurs cheveux, comme 3 brins qui formeront une tresse. 3 histoires qui s'entrelacent, se révèlent lent sous nos yeux. Sans pathos, mais infiniment touchants. Smita en Inde. Giulia en Sicile, à Palerme. Sarah en Amérique.

In this unforgettable international bestseller, three women from very different circumstances around the world find their lives intertwined by a single object and discover what connects us—across cultures, across backgrounds, and across borders. In India, Smita is an untouchable. Desperate to give her daughter an education, she takes her child and flees her small village with nothing but resourcefulness, eventually heading to a temple where she will experience a rebirth. In Sicily, Giulia works in her father's wig workshop, the last of its kind in Palermo. She washes, bleaches, and dyes the hair provided by the city's hairdressers, which is now in short supply. But when her father

is the victim of a serious accident, she discovers that the company ' s financial situation is dire. Now she must find a way to save her family ' s livelihood. In Canada, Sarah is a successful lawyer and twice-divorced mother of three children whose identity is wrapped up in her work. Just as she expects a big promotion, her life is shattered when she ' s diagnosed with cancer. A moving novel of hope and renewal, *The Braid* is a celebration of womanhood and the power of connection and perseverance.

The program of the Institute covered several aspects of functional integration -from a robust mathematical foundation to many applications, heuristic and rigorous, in mathematics, physics, and chemistry. It included analytic and numerical

computational techniques. One of the goals was to encourage cross-fertilization between these various aspects and disciplines. The first week was focused on quantum and classical systems with a finite number of degrees of freedom; the second week on field theories. During the first week the basic course, given by P. Cartier, was a presentation of a recent rigorous approach to functional integration which does not resort to discretization, nor to analytic continuation. It provides a definition of functional integrals simpler and more powerful than the original ones. Could this approach accommodate the works presented by the other lecturers? Although much remains to be done before answering "Yes," there seems to be no major obstacle along the road. The other courses taught during the first week presented: a) a solid introduction to functional numerical techniques (A. Sokal)

and their applications to functional integrals encountered in chemistry (N. Makri). b) integrals based on Poisson processes and their applications to wave propagation (S. K. Foong), in particular a wave-restorer or wave-designer algorithm yielding the initial wave profile when one can only observe its distortion through a dissipative medium. c) the formulation of a quantum equivalence principle (H. Kleinert) which, given the flat space theory, yields a well-defined quantum theory in spaces with curvature and torsion.
