This foam pool float comes with honeycomb closed-cell texture on one side and glossy smooth texture on the other. The super-soft buoyant foam of this mattress also offers an excellent bed for resting on a watery surface. Moreover, the integral steel frame of this pool float offers support during a floating condition.

Froth flotation is a process for selectively separating hydrophobic materials from hydrophilic. This is used in mineral processing, paper recycling and waste-water treatment industries. Historically this was first used in the mining industry, where it was one of the great enabling technologies of the 20th century.

Froth flotation - Wikipedia

Froth flotation is a method for separating hydrophobic materials (which will not mix with water) from hydrophilic materials (which readily mix with water). Since its discovery, froth flotation has been a major component for the processing of sulfide-rich ores, including copper, coal, and refractory gold.

Froth Flotation and Gold Extraction - Manhattan Gold & Silver

Froth flotation is a process that selectively separates materials based upon whether they are water repelling (hydrophobic) or have an affinity for water (hydrophilic). Importantly, the word flotation is also used in the literature to describe the process in density separation in which lighter microplastics float to the surface of a salt solution.
