Earned Schedule Plus (ES+) is intended for project managers, engineers and performance analysts; that is, those who use Earned Value Management (EVM) with Earned Schedule (ES) for the purpose of project control. ES is an extension to EVM providing the capability of time-based management and control of schedule performance. After several years, tagged as an emerging practice, ES is now normalized to EVM with its inclusion in the Project Management Institute Practice Standard for Earned Value Management, and notably, in the International Standards Organization publication, ISO 21508:2018, Earned Value Management in Project and Programme Management. ES+ introduces analysis methods developed since publication of the Earned Schedule book in 2009. Along with the new methods, there are chapters on the need for measures of project performance, the origin and history of Earned Schedule, and the studies establishing the reliability of ES duration forecasting. The new and enhanced methods presented in ES+ include advances in · Project duration forecasting · Assessing project recovery · Measuring the impact of rework on project cost and duration. The developmental research is included along with application examples to promote understanding and encourage use. Applying the advanced ES practices described in this book will significantly benefit project managers in their efforts to achieve

The book is about RBPS (Risk Based Problem Solving) and RBDM (Risk Based Decision Making). Every project is subjected to the known risks and the unknown risks. Known risks are the four constraints of a project. The four constraints are; scope; schedule; cost; and quality. Unknown risks are the uncertainties and variances that surround every project. The book discusses in detail, with examples and risk stories to support the points made in the book, PM, RM, EVM, and Subcontract Management (SM). Understanding these four disciplines and how to incorporate them into a project, is essential to effective RBPS and RBDM. Project Management knowledge and skills are necessary to manage the known risks. Risk Management knowledge and skills are essential to identifying, assessing and mitigating unknown risks. Earned Value Management is important to tracking and controlling risk mitigation plans. Many companies outsource most of their work scope to subcontractors, so having Subcontract Management knowledge and skills is key to mitigating subcontract risks. The future of work is also discussed in detail. Future work will be projectized more. Working remotely is a trend that is increasing. Project Managers will have a more difficult problem in the future managing a diverse workforce of on-site, remote, and part-time workers. You need to be aware of future
