Despite recent advances in important aspects of the lives of girls and women, pervasive challenges remain. These challenges reflect widespread deprivations and constraints and include epidemic levels of gender-based violence and discriminatory laws and norms that prevent women from owning property, being educated, and making meaningful decisions about their own lives--such as whether and when to marry or have children. These often violate their most basic rights and are magnified and multiplied by poverty and lack of education. This groundbreaking book distills vast data and hundreds of studies to shed new light on deprivations and constraints facing the voice and agency of women and girls worldwide, and on the associated costs for individuals, families, communities, and global development. The volume presents major new findings about the patterns of constraints and overlapping deprivations and focuses on several areas key to women s empowerment: freedom from violence, sexual and reproductive health and rights, ownership of land and housing, and voice and collective action. It highlights promising reforms and interventions from around the world and lays out an urgent agenda for governments, civil society, development agencies, and other stakeholders, including a call for greater investment in data and knowledge to benchmark progress.

This volume is the first to analyze populism’s international dimension: its impact on, and interaction with, foreign policy and international politics. The contributions to this volume engage conceptual theoretical issues and overarching questions such as the still under-specified concept of populism or the importance of leadership and the mass media for populism’s global rise. They zoom in on populism’s effect on both different countries’ foreign policies and core international concerns, including the future of the liberal world order and the chances for international conflict and cooperation more generally.

Opening the Black Box: Contextual Drivers of Social Accountability fills an important knowledge gap by providing guidance on how to assess contextual drivers of social accountability effectiveness. This publication aims to more strategically support citizen engagement at the country level and for a specific issue or problem. The report proposes a novel framing of social accountability as the interplay of constitutive elements: citizen action and state action, supported by three enabling levers: civic mobilization, interface and information. For each of these constitutive elements, the report identifies ‘drivers’ of contextual effectiveness which take into account a broad range of contextual factors (e.g., social, political and intervention-based, including information and communication technologies). Opening the Black Box offers detailed guidance on how to assess each driver. It also applies the framework at two levels. At the country level, the report looks at ‘archetypes’ of challenging country contexts, such as regimes with no formal space or full support for citizen-state engagement and fragile and conflict-affected situations. The report also illustrates the use of the framework to analyze specific social accountability interventions through four case studies: Sierra Leone, Pakistan, Yemen, and the Kyrgyz Republic.

The internet has fundamentally transformed society in the past 25 years, yet existing theories of mass or interpersonal communication do not work well in understanding a digital world. Nor has this understanding been helped by disciplinary specialization and a continual focus on the latest innovations. Ralph Schroeder takes a longer-term view, synthesizing perspectives and findings from various social science disciplines in four countries: the United States, Sweden, India and China. His comparison highlights, among other observations, that smartphones are in many respects more important than PC-based internet uses. Social Theory after the Internet focuses on everyday uses and effects of the internet, including information seeking and big data, and explains how the internet has gone beyond traditional media in, for example, enabling Donald Trump and Narendra Modi to come to power. Schroeder puts forward a sophisticated theory of the role of the internet, and how both technological and social forces shape its significance. He provides a sweeping and penetrating study, theoretically ambitious and at the same time always empirically grounded.The book will be of great interest to students and scholars of digital media and society, the internet and politics, and the social implications of big data.

This book provides insight into the diverse ways young people from around the world are regenerating politics in innovative and multifaceted ways. The authors, who include academics and activists, challenge claims that young people are apolitical, apathetic and living up to the ‘time generation’ stereotype. Contributions cover a rich body of case examples of traditional and new forms of youth politics in response to situated injustices and political and socio-economic crises. Significant and optimistic, the collection presents strong evidence from across the globe that these developments are not isolated incidences, but are in fact part of a systemic, large-scale transformation leading to a regeneration of the political landscape by young people. The book is aimed at students and scholars in the fields of politics, sociology, policy studies and youth and childhood studies.

After President Trump’s election, BREXIT and the widespread rise of far-Right political parties, much public discussion has intensely focused on populism and authoritarianism. In the middle of the twentieth century, members of the early Frankfurt School prolifically studied and theorized fascism and anti-Semitism in Germany and the United States. In this volume, leading European and American scholars apply insights from the early Frankfurt School to present-day authoritarian populism, including the Trump phenomenon and related developments across the globe. Chapters are arranged into three sections exploring different aspects of the topic: theories, historical foundations, and manifestations via social media. Contributions examine the vital political, psychological and anthropological theories of early Frankfurt School thinkers, and how their insights could be applied now amidst the insecurities and confusions of twenty-first century life. The many theorists considered include Adorno, Fromm, Löwenthal and Marcuse, alongside analysis of Austrian Facebook pages and Trump’s tweets and operatic media drama. This book is a major contribution towards deeper understanding of populism’s resurgence in the age of digital capitalism.

What influences decisions of the U.S. Supreme Court? For decades social scientists focused on the ideology of individual justices. Supreme Court Decision Making moves beyond this focus by exploring how justices are influenced by the distinctive features of courts as institutions and their place in the political system. Drawing on interpretive-historical institutionalism as well as rational choice theory, a group of leading scholars consider such factors as the influence of jurisprudence, the unique characteristics of supreme courts, the dynamics of coalition building, and the effects of social movements. The volume’s distinguished contributors and broad range make it essential reading for those interested either in the Supreme Court or the nature of institutional politics. Original essays contributed by Lawrence Baum, Paul Brace, Elizabeth Bussiere, Cornell Clayton, Sue Davis, Charles Epp, Lee Epstein, Howard Gillman, Melinda Gann Hall, Ronald Kahn, Jack Knight, Forrest Maltzman, David O’Brien, Jeffrey Segal, Charles Sheldon, James Spriggs II, and Paul Wahlbeck.
