Introduces three-dimensional shapes, and describes how architects use them to design and construct houses and other buildings.

Dazzling array of toys-acrobats, angels, clowns, dancing dolls, masks & more-made with simple tools, paper & cardboard.

Provides comprehensive articles on significant issues, methods, and theories currently combining the studies of technology and literacy.

"This book focuses on issues in literacy and technology at the K-12 level in a holistic manner so that the needs of teachers and researchers can be addressed through the use of state-of-the-art perspectives"--Provided by publisher.

Houses and other buildings are often built on plots of land. Some houses are made of bricks, which are three-dimensional shapes. The study of shapes is called geometry, and architects must know a lot about different kinds of shapes and how they fit together. There are many steps that go into making a house. First they lay the foundation, and then they build the floors, the walls, and the roof.

This full-color Student Guided Practice Book has been created specifically to support a seventh grade reading level and includes reading passages, comprehension activities, writing activities, and daily comprehension review.

Architect-designed houses of the period 1950-65 proposed an innovative response to the social, economic, and climatic conditions of post-war Australia. At the same time they embraced the aesthetic, technological, and egalitarian aspirations of modern architecture. *An Unfinished Experiment in Living* traces the emergence of this architectural phenomenon in Australia, documenting the full range of its expression: from the postwar optimism of the early 1950s through to the affluence of the 1960s. It is a catalogue of the most significant houses of the period. It includes comprehensive plans and period photographs of 150 houses from around Australia, dating from a time when the great Australian dream was the single family house. This book puts forward new research founded on the premise that the most significant houses of the 1950s and 60s represent an unfinished and undervalued experiment in modern living. Issues such as the open plan, the changing nature of the family, the embrace of advances in technology, the use of the courtyard, and the orientation of the house to capture sun and privacy, were valuable and critical lessons. This is a compelling reminder of their continuing relevance. [Subject: Architecture, Design, Australian History, Sociology]
