A seashell is usually the exoskeleton of an invertebrate (an animal without a backbone), and is typically composed of calcium carbonate or chitin. Most shells that are found on beaches are the shells of marine mollusks,

Download File PDF Seashell

partly because these shells are usually made of calcium carbonate, and endure better than shells made of chitin.

Seashell - Wikipedia

Situated near Panama City Beach, Shell Island is aptly named and the perfect day trip for shelling enthusiasts.
