Modelling time series. There are many ways to model a time series in order to make predictions. Here, I will present: moving average; exponential smoothing; ARIMA; Moving

average. The moving average model is probably the most naive approach to time series modelling. This model simply states that the next observation is the mean of all past observations.

Time series analysis is a statistical technique that deals with time series data, or trend analysis. Time series data means that data is in a series of particular time

periods or intervals. The data is considered in three types: Time series data: A set of observations on the values that a variable takes at different times.

Time Series Analysis - Statistics Solutions
The most important change in edition 2 of the book is that we have restricted our focus to time series forecasting. That is, we no longer consider the problem of cross-sectional prediction. Instead, all forecasting in this book concerns prediction of data at future times using observations collected in the past.
