Neuroscientists have found that the two sides of the brain work together to perform a wide variety of tasks and the two sides communicate through the corpus callosum. In a study of over 1000 participants by the University of Utah, it was revealed that while activity was sometimes higher on one side or the other in certain critical regions, on average both sides of the brain were essentially equal in their activity.

Why Using Both Sides of our Brain is Important

Ambidexterity is the ability to use both the right and left hand equally well. When referring to objects, the term indicates that the object is equally suitable for right-handed and left-handed people. When referring to humans, it indicates that a person has no marked preference for the use of the right or left hand.

Ambidexterity - Wikipedia

Bilateral coordination is the ability to use both sides of the body at the same time in a controlled and organized manner. This can mean using both sides to do the same thing, as in pushing a rolling pin, using alternating movements such as when walking, or using different movements on each side, such as when cutting with scissors while holding and controlling the paper with the other hand.

bilateral coordination
