With the release of the DSC-RX100 II camera, Sony has built upon the success of the earlier RX100 model, adding a hot shoe, tilting LCD screen, Wi-Fi capability, upgraded digital sensor, and several other enhancements. White Knight Press, which published a widely praised guide to the RX100, has released this new guide book that addresses all of the new features of the RX100 II and includes a full discussion of the many advanced features that are common to both camera models. With the publication of Photographer 's Guide to the Sony DSC-RX100 II, author Alexander White provides users of the RX100 II with a guide to all operations, features, menus, and controls of the camera. Using a patient, tutorial-like approach, the book shows beginning and intermediate photographers not only how to accomplish things with the RX100 II, but when and why to use the camera 's many features. The book does not assume specialized knowledge by the reader as it explains topics such as autofocus, manual focus, depth of field, aperture priority, shutter priority, exposure compensation, white balance, and ISO sensitivity. The book provides full details of the camera 's numerous shooting modes as well as its many menu options for shooting, playback, setup, and special effects. The book includes full coverage of the new features of the RX100 II, including the use of the camera 's built-in capability to transfer images and videos over a wireless network and to allow the camera to be controlled remotely by a smartphone or tablet. The book includes approximately 400 photographs, most in full color, which illustrate the camera 's controls, shooting screens, and menus. The images also provide examples of the types of photographs that can be taken using the many creative settings of the camera, including the Photo Creativity settings, which let the photographer alter the color processing of images; the Scene shooting mode, with settings that are optimized for various subjects, including landscapes, portraits, and action shots; the Creative Style and Picture Effect menu options, which offer dramatic options for altering the appearance of images; and the camera 's strong array of features for continuous shooting and shooting in dim lighting. In addition, the book goes beyond the bounds of everyday photography, and provides introductions to more advanced topics such as infrared photography, street photography, astrophotography, digiscoping, and macro photography. The book also includes a full discussion of the video recording abilities of the RX100 II, which can shoot high-definition (HD) video with stereo sound, and which offers manual control of exposure and focus during movie recording. In three appendices, the book provides information about accessories available for the RX100 II, including cases, external flash units, viewfinders, and filter adapters, and includes a list of web sites and other resources for further information. Also, the book includes a detailed appendix with helpful " quick tips " that give particular insights into how to take advantage of the camera 's features in the most efficient ways possible.

This book gathers all the content from the GPU Pro series (Vols 1-7; 2010-2016) into a convenient single source anthology covering rendering techniques in computer graphics. It covers ready-to-use ideas and procedures that can help solve many computer graphics programming challenges. The articles by leading programmers contained in this volume reflect the methods and techniques used to sample real-world phenomenon or to model special effects using these methods and techniques in their work.

The four-volume set LNCS 8925, 8926, 8927 and 8928 comprises the thoroughly refereed post-workshop proceedings of the Workshops that took place in conjunction with the 13th European Conference on Computer Vision, ECCV 2014, held in Zurich, Switzerland, in September 2014. The 203 workshop papers were carefully reviewed and selected for inclusion in the proceedings. They were presented at workshops with the following themes: where computer vision meets art; computer vision in vehicle technology; spontaneous facial behavior analysis; consumer depth cameras for computer vision; "chlearn" looking at people: pose, recovery, action/interaction, gesture recognition; video event categorization, tagging and retrieval towards big data; computer vision with local binary pattern variants; visual object tracking challenge; computer vision + ontology applies cross-disciplinary technologies; visual perception of affordance and functional visual primitives for scene analysis; graphical models in computer vision; light fields for computer vision; computer vision for road scene understanding and autonomous driving; soft biometrics; transferring and adapting source knowledge in computer vision; surveillance and re-identification; color and photometry in computer vision; assistive computer vision and robotics; computer vision problems in plant phenotyping; and non-rigid shape analysis and deformable image alignment. Additionally, a panel discussion on video segmentation is included.
